Paper No(s)/Mail Date: _____
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: _____

The Disclosure is objected to because of the following informalities: On Page 5, "Disclosure of the invention" is recommended to be changed to "Summary of the Invention" and on Page 16 of the Specification, "Best mode for carrying out the invention" is recommended to be changed to "Detailed Description".

Appropriate correction is required.

Claims 9, 10, 14-17 and 20 are objected to because of the following informalities: Claim 9 refers to "a third voltage application portion" and a second, but there is no claimed first voltage application portion within the claim, so as to avoid any possible confusion, "a third voltage application portion" should be changed to "a first voltage application portion". Claim 10 requires a period at the end of the claim. Claims 14-17 refer to second and third transformers with no reference having been made to a first transformer within the claim chain, therefore, to avoid any possible confusion, the transformers should be referred to as first and second transformers. The "third voltage application portion" in Claim 20 should be "a first voltage application portion". Appropriate correction is required.

The following is a Statement of Reasons for the Indication of Allowable Subject Matter: The claimed combinations found within Independent Claims 1-3, 7-9 and 18-20 are considered to be allowable over the Prior Art of Record. The combinations are drawn to ion generating elements, ion generating apparatus or an electric appliance having the ion generating apparatus. Each combination require first and second dischargers, both on the same flat surface of a base member but separately from and independently of each other. The combinations of Claims 1 and 2 further require that

the first and second dischargers are on a diagonal line. The combinations of Claims 2 and 3 include further details drawn to the conducting portions around the discharging portions or induction electrodes buried in a dielectric layer. The remaining combinations found within the Independent Claims 7-9 and 18-20 contain further defining structure. The closest Prior Art teaching comes from (JP 08-171977), which teaches the fabrication of more than one discharger upon the same surface of a base or substrate and including the buried induction electrodes. However, there is no teaching or suggestion that the dischargers be separate and independent from each other, as they are taught as having shared induction electrodes. There is also no suggestion that the dischargers be on a diagonal on the first surface of the substrate. It is the opinion of the Examiner that the claimed combinations found within Independent Claims 1-3, 7-9 and 18-20 are novel and unobvious in view of the Prior Art of Record.
